

CLIENT WEB SERVER

How many orders can you process at once?

Five clients want to place rush orders for records delivery. Seven more want to locate that important document and view it... now. And yet another wants to purchase new boxes. The fax is busy, and the phones are ringing off the hook.

Let the clients process their orders on-line!

Don't pick up the phone. Pick up the orders— in seconds. Increase efficiency and your bottom line by offering clients a better way to manage their own inventory — on-line with Total Recall™ Client Web Server.

Users can access inventory in Total Recall over the Internet with any standard Web Browser. They can place orders for pick-up or delivery, track the status of orders, run queries and print reports. Your clients can even view digitally-imaged documents on-line.

Put the details into the client's hands. Simply choose which services you would like to make available to each client and let them handle their own orders — including those miscellaneous services such as purchasing boxes. Your staff just prints the orders created by your clients.

Save time, reduce costs and efficiently process more orders. Answer the client's needs — not the phone.

Process More Orders.

Save Time and Money.

Let Technology Work for You.

Get the Solution.

TOTAL RECALL™
Client Web Server

Process More Orders.

Let your clients initiate and track their own work orders on-line with Total Recall Client Web Server. With this powerful connection, your clients can view digital files created upon request with Scan On Demand™ or archive files created with our High Speed Digital Imaging. Fully integrated with Total Recall Records Management Software, these digital imaging solutions work together to expand your services, increase your bottom line and meet the client's demands. Take advantage of the technology — from DHS Worldwide.
